

SAF Accreditation of Educational Programs in Forestry and Forest Technology

What is Accreditation?

In the United States, accreditation is a non-governmental, peer-review process that assures the quality of the postsecondary education students receive. Educational institutions or programs volunteer to undergo this review periodically to determine if certain criteria are being met. It is important to understand that accreditation is not a ranking system. It is simply assurance that a program or institution meets established quality standards.

- Accreditation provides colleges and universities with a structured mechanism to assess, evaluate, and improve the quality of their forestry program.
- Accreditation helps students and their parents choose quality college programs.
- Accreditation enables employers to recruit graduates they know are well-prepared.
- Accreditation is used by registration, licensure, and certification boards to screen applicants.

There are two organizations responsible for the supervision of accreditation in the United States depending on the classification of the accrediting body: the U.S. Department of Education and the Council for Higher Education Accreditation. The SAF accreditation process is recognized by the Council for Higher Education Accreditation (www.chea.org).

The Society of American Foresters (SAF) is responsible for the accreditation of postsecondary degree-granting programs in forestry/urban forestry and forest technology. SAF accredits specific programs, not degrees, departments, colleges, or institutions. The forestry/urban forestry and forest technology accreditation processes are separate and distinct but complementary. At SAF, forestry/urban forestry and forest technology programs are evaluated and accredited by two separate accreditation committees using two separate sets of accreditation criteria. SAF began accrediting 4-year and 5-year educational programs that lead to a first professional degree in forestry at the bachelor's or master's level in 1935. A specialized accreditation for educational programs that lead to a first professional degree in urban forestry was added in 2005. In 1971, SAF established guidelines for recognizing 2-year educational programs in forest technology that lead to associate of applied science degree in forest technology or the equivalent and initiated a program of accreditation on January 1, 2009. The forest technology program is currently in a state of transition from recognition to accreditation.

The Society of American Foresters has filed a letter of intent with the Council for Higher Education Accreditation (CHEA) to seek a change of recognized scope of accreditation to include associate degree programs in forest technology. Until final action by the CHEA Board of Directors, the Society of American Foresters is recognized only for its current scope of accreditation approved May 2001. The current CHEA recognized scope of accreditation for SAF is as follows: Programs, first professional degree in forestry at the bachelor's or master's level.

There is a difference between forestry and forest technology programs.

SAF-accredited forestry undergraduate and graduate programs tend to have a greater focus on the assumptions and philosophy of forest management. Forestry undergraduate programs provide a broader liberal arts education and usually involve more and a higher level of mathematics. In the workforce, forestry graduates typically spend their time in forest resource planning and development, management and supervision, and policy and program administration. They often work as part of an interdisciplinary team with other professionals such as wildlife biologists, planners, or recreation specialist. Some U.S. state boards of forestry licensure and the Certified Forester® program will allow only graduates of forestry programs-not forest technology programs-to become credentialed. (Visit www.certifiedforester.org for information regarding certification requirements.)

Forest technology programs usually focus on application. In the workforce, forest technology graduates spend their time making plans work: laying out timber sales, supervising planting and thinning crews and conducting prescribed burns. When implementing management plans, forest technicians may work closely with technicians who specialize in other disciplines such as wildlife management.

Distance education programs

SAF's accreditation criteria require that accredited programs include laboratory experiences. These are difficult to achieve via remote learning environments. However, some SAF-accredited programs do offer portions of their programs remotely (i.e., online). Please contact programs individually for information about what delivery options each has to offer.

When you choose an accredited program, you are choosing wisely

Be proud to choose an SAF-accredited program. To employers, graduate schools, and licensure, certification, and registration boards, graduation from an accredited program signifies adequate preparation for entry into the profession. These groups often require graduation from an accredited program as a minimum qualification. Many state boards of professional licensure in forestry require that applicants have graduated from an SAF-accredited program. Other states and the Certified Forester® program require an additional evaluation for educational standards for applicants who have graduated from non-SAF-accredited programs. No matter which forestry option you study — forest management, forest biology, urban forestry, watershed management or another option, SAF-accreditation is an important indicator of the program's commitment to quality and may be a key to your professional future.

For further information, visit the SAF website <http://www.safnet.org> or contact the Society of American Foresters, 5400 Grosvenor Lane, Bethesda, MD 20814-2198; (866) 897-8720, ScienceEd@safnet.org.

SAF Accredited Educational Programs in Forestry

The institutions named below have requested SAF accreditation and offer programs that have been found to meet minimum standards for objectives, program, faculty, students, administration, parent-institution support, and physical resources and facilities. Not all forestry programs at these institutions are accredited or recognized by SAF. Only those programs listed below are accredited by SAF.

The first year shown in each entry indicates the year the program was first accredited or became a candidate for accreditation; the second year indicates the year the last onsite review was completed; and the third year indicates the year current accreditation or candidacy expires, unless otherwise noted.

Alabama

SAF Accredited Educational Programs in Forest Technology

The institutions named below have requested SAF accreditation or recognition and offer programs that have been found to meet minimum standards for objectives, program, faculty, students, administration, parent-institution support, and physical resources and facilities. Not all forestry programs at these institutions are accredited or recognized by SAF. Only those programs listed below are accredited by SAF.

During this initial period of transition from recognition to accreditation of educational programs in forest technology, the programs fall into three categories based on their progress through the accreditation process. The categories are:

- **Accredited** – The program meets all requirements for SAF accreditation of an educational program in forest technology and has received final approval from the SAF Committee on Forest Technology School Accreditation.
- **Conditionally Accredited** – The program is an SAF Recognized educational program in forest technology, has requested accreditation, and is awaiting an onsite review and final approval from the SAF Committee on Forest Technology School Accreditation.
- **Recognized** – The program is an SAF Recognized educational program in forest technology and has not yet requested accreditation.

The first year shown in each entry indicates the year the program was first recognized or accredited; the second year indicates the year the last onsite or comprehensive review was completed; and the third year indicates the year current recognition or accreditation expires, unless otherwise noted.
